Wallet Fee Requirements Summary

Core Logic

- Wallet fees are determined by the wallet's source currency
- Default configuration: one waived source currency per customer, $350/wallet/month for all others
- Custom configurations possible: multiple waived currencies and variable pricing per currency

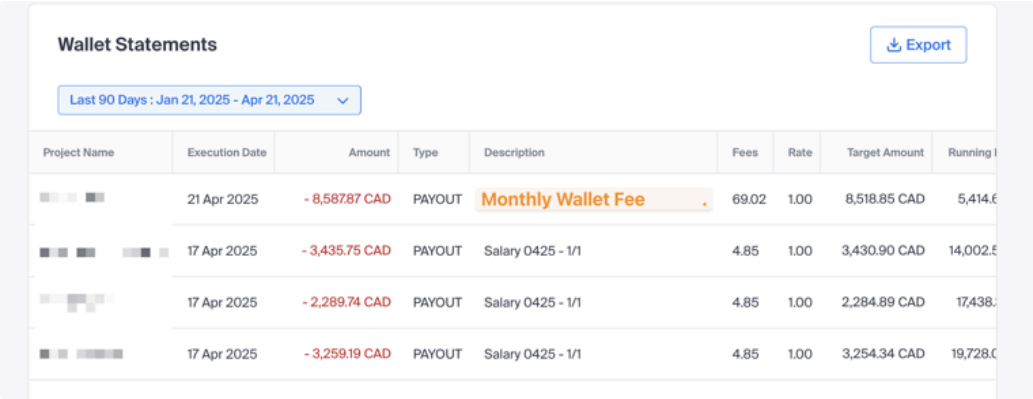
Fee Application Rules

1. Monthly charge applies only to wallets with transactions during the billing period
2. Fee is deducted directly from the wallet balance
3. Fee appears on statements as "Wallet Monthly Fee - $350" (or applicable amount)
4. Fee breakdown and configuration stored in subscription service - Figma
5. **Option to disable wallet fees at the organization level for invoice users**

Development Considerations

- Need to track transaction activity per wallet monthly
- Implement configuration storage in subscription service for:
  - Default waived currency
  - Custom waived currencies
  - Per-currency pricing overrides
- Create statement entry mechanism
- Develop organization-level fee toggle functionality

Present the Fee in the wallet Statement:



Wallet Statements
